Fascinating research from VA Tech in conjunction with Cornell published this past March that shows pears responding extraordinarily well to Regalia treatment for fireblight control. The study shows that five springtime sprays resulted in a staggering 100% shoot blight control . . . in pears. A sharp contrast is drawn between the effect of Regalia on similarly treated apple trees, although supporting research is not specified. The mechanism(s) by which giant knotweed extract correlates to apparent SAR response in tree are still something of a mystery, as is the divergent response to Regalia in different pome fruits.

*Proof of concept for management of shoot blight and fire blight cankers on pear with preventive spray applications of giant knotweed extract*
